

ABSTRACT

The invention is directed to a drying cabinet (1) with a cleaning device (10) which can be inserted into its interior (4). According to the invention, the cleaning device (10) comprises a carrier (11) which is supported on the interior bottom of the drying cabinet (1) and which has a duct (15) arranged in its interior, a plurality of horizontal support arms (12) with a cavity (16) being fastened to the carrier (11), and the cavity (16) communicates with the duct (15). A support arm (12) is arranged above each of the heating plates (5). Each of the support arms (12) is outfitted with a spray arm (13) which is rotatable horizontally around an axis A. Each spray arm (13) has a quantity of nozzles (14). In addition, the carrier (11) and the drying cabinet (1) have means (20, 21, 22) through which a cleaning agent can be supplied to the duct (15). In this way, a drying cabinet (1) with a cleaning device (10) having an improved cleaning action is provided.
